Research

Research shows that bracing can be an effective treatment for managing adult scoliosis, supporting the spine, reducing pain and improving quality of life.

Research has shown:

Part-time bracing significantly reduces progression of curvatures and improves quality of life

Palazzo et al, Effects of Bracing in Adult With Scoliosis: A Retrospective Study, DOI: 10.1016/j.apmr.2016.05.019

Part-time bracing in adult scoliosis cases can improve chronic pain

Weiss et al, Scoliosis bracing and exercise for pain management in adults - A case report, DOI: 10.1589/jpts.28.2404

Versatile

Adult Scoliosis can originate from a preexisting adolescent scoliosis, or it can be a new development of scoliosis in adulthood (De Novo Scoliosis).

ScoliBrace can be prescribed for both pre-existing and degenerative adult scoliosis.

Adult scoliosis patients may only need to wear the brace part -time each day to get significant pain relief and postural improvement.

Brace wear treatment can also be combined with a scoliosis specific exercise program.

Scoliosis is a 3 Dimensional condition, so effective treatments need to be 3 dimensional too. braceScan combines 3D full-body laser scanning technology, x-rays and posture photographs.

Every brace is custom made for the individual by a dedicated design team and Computer Aided Design and Manufacture.

Patient Friendly

ScoliBrace opens and closes at the front making it easy to wear and remove without assistance.

Most ScoliBraces designed for adults are low profile designs, that are nearly invisible under clothing.

Reduce pain

Improve posture and balance

Improve cosmetics

Slow or stop progression
